C1.ai SOLUTION BRIEF

C1 Identity Platform

One platform to govern identity, access, and agent work.

ramp instacart zscaler DigitalOcean Brex Klaviyo qualtrics XM

Identity is growing faster than governance.

Every new employee, service account, and AI agent adds access that someone has to review, own, and eventually remove. AI is only as valuable as the access and context it can act on. Most organizations can't deliver the right access to every identity, across every system, at the speed the business needs. Security, IT, and identity teams add a new integration for every new agent or workflow. Context fragments, access reviews take weeks, and standing privileges pile up. The risk is real: 80% of organizations experienced at least one identity-related breach in the past year.[1]

AI adoption compounds the problem. Agents have no identity. Credentials leak into agent context. Nothing enforces policy at runtime. Shadow AI is already running. And the human workforce problem never went away. Without a governed path that moves at enterprise speed, teams work around governance entirely.

What C1.ai delivers

Complete visibility

Every person, service account, workload, and agent, linked to its accounts, entitlements, and accountable owners. Risky access gets found and fixed before it becomes a security issue.

One connected inventory

Findings, governance, agent access, credentials, and work run on the same identity and access data. People and agents are governed under one policy and one audit trail.

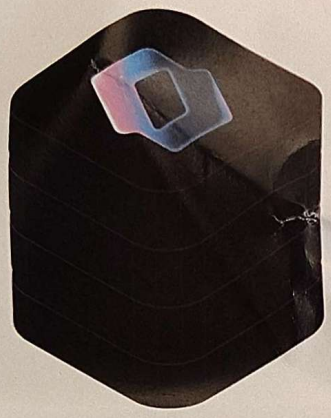

Built for engineers

Automate through the REST API and SDKs, the C1.ai CLI, Terraform, and Functions. Access policy lives in code, so every change is reviewed, versioned, and repeatable.

One platform. The full identity stack.

The C1 Identity Platform connects data from your systems into one shared identity and access inventory. Every finding, review, grant, and agent action draws on the same data, so security sees the full picture, IT stops stitching tools together, and governance keeps pace as the business adds people, systems, and agents.

For governance, that means automated joiner-mover-leaver workflows, just-in-time access in place of standing privilege, and AI-assisted access reviews, so teams can modernize identity without rebuilding it. For AI, agents get their own scoped identities instead of borrowed human ones, inference is routed by risk and cost, and agent keys stay in a vault, out of code and context. An open-source connector ecosystem extends coverage to any system.

GOVERN	Identity	Use AI to manage lifecycle, access requests, reviews, and compliance for people, non-human identities, and agents.
RUN	Secure agents	Give agents policy-controlled access to models, tools, and credentials at runtime.
WORK	Put AI to work	C1 Agents complete multi-step jobs across connected systems, with human approval for sensitive changes.
PLATFORM		Connect identity data, policy, findings, and actions across the C1.ai product suite.

C1.ai is the identity platform for the AI era.

See every identity in one place.

Employees, contractors, service accounts, and AI agents in one identity graph. Eliminate blind spots, surface risks, and right-size access.

Find and eliminate access risk.

Surface orphaned accounts, high-risk access, and entitlement sprawl across your environment, and remove them before they become security issues.

Every system, already covered.

400+ C1 Connectors, built on Baton, our open-source connector framework, cover nearly every system in the modern stack. Run them hosted by C1.ai or inside your own infrastructure, and reach on-prem systems with C1 Bridge.

Every agent, governed from day one.

AI agents act on systems through MCP. 3,000+ C1 MCP Servers route every agent tool call through the same policy engine and audit trail as every human request.

Put AI to work. Everywhere.

Authorization moved from the network, to the endpoint, and now to identity. The companies leading in AI transformation aren't the ones with the most agents. They're the ones who can govern every agent, tool, and human on the systems that matter, the moment the business needs them. That takes identity infrastructure that's cross-cutting, real-time, and policy-driven by default. C1.ai puts AI to work, with the identity platform built for the AI era.

About C1.ai

C1.ai

C1.ai is the identity platform for the AI era. Our platform connects humans and agents to enterprise systems with scoped access, enforced policies, human approval, and a record of every action. With C1.ai, the fastest path to AI adoption at scale is the governed path — giving organizations visibility and control without sacrificing security or slowing innovation. Companies such as Ramp, Zscaler, Qualtrics, and DoorDash trust C1.ai to govern identity, secure agents, and empower their teams to put AI to work.

Put AI to work.

Barndoor.ai

Barndoor AI Gateway

The governed path to using AI and agents across your business

The AI gateway governs every model and MCP server your teams, agents, and automations use.

100+
MCP servers + custom

100+
AI models + self-hosted

SOC 2
Type II certified

What the AI gateway enforces on every call

☑ Human & agent access

RBAC by role, group, tool, and action, with a dedicated identity for every agent.

☑ Runtime policy

Allow, deny, or require approval per tool call and action, enforced inline.

☑ AI-ready DLP

PII and secrets masked or blocked before they reach a model or MCP server.

☑ Routing & fallback

Frontier and self-hosted models, routed to the most cost-effective option.

☑ Usage & cost control

Real-time spend and hard caps by user, team, agent, and model.

☑ Observability & audit

Every action and the policy behind it, streamed to Splunk or Datadog.

Barndoor Automations

Create and run reliable AI automations

Describe a process and Barndoor turns it into defined steps that run the same way every time.

Deterministic
No model involved

Scoped inference
AI judgment, fenced in

Validated
Every output checked to schema

Conditional
Control flow you can read

Precise
Schema-validated output on every run.

Scoped
Inference only when and where you define it.

Fast
Built in natural language. No nodes to wire.

Run anywhere
Portable across Claude, ChatGPT, Slack, or as an API or MCP.

AI GATEWAY + AUTOMATIONS

Ship AI automations to every team. Govern them all from one gateway.

Unified policy	Use the same access controls and DLP on every step.
One audit trail	See every run's models, inputs, and outputs.
Controlled context	Define the data and model for each step of the workflow.
Distributions	Provision automations to teams and agents by group, role, or person.

Barndoor is secure by design

SOC 2 Type II. Zero-trust access for every agent and request.

Deploy where your data lives

SaaS
Fully managed

Private cloud
In your VPC

On prem
Data residency

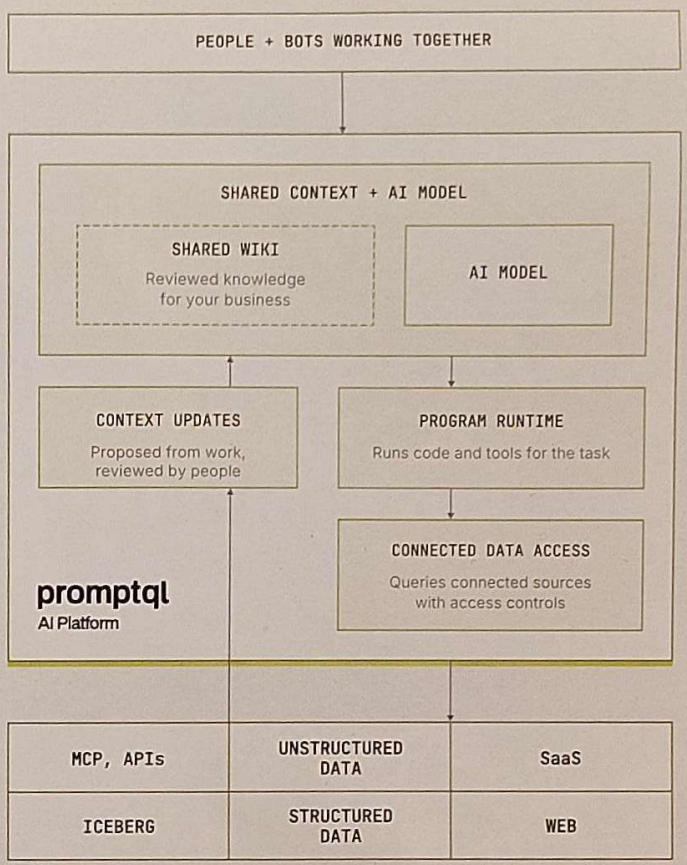

> *"You have to give every employee, not just the early adopters, a safe way to build AI skills instead of being left on their own.* ***Barndoor allows us to feel we can sleep better.***"

Technical innovations

- ✓ **Operational wiki.** Shared knowledge for your business. Capture definitions, decisions and exceptions. Review and refine them as work changes.
- ✓ **Code-backed execution.** Bots run code to query data, calculate and carry out tasks. Inspect the work and reuse programs for repeatable jobs.
- ✓ **Connected data access.** Query connected sources without a new warehouse. Save outputs or materialize data when the workflow calls for it.
- ✓ **Teachable in the flow.** Correct assumptions and explain exceptions. Review proposed wiki updates to control what becomes shared knowledge.
- ✓ **Multiplayer design.** One bot, multiple collaborators. Invite people to review the work, add context and move it forward together.
- ✓ **Permissions and governance.** Bots use your permissions; participants see outputs. Configure access and scopes. Dedicated infra with Enterprise.

PromptQL impact

Grounded in your business
Give bots your team's definitions, rules and exceptions. Review sources and assumptions, correct what matters and build shared context your team can reuse.

Start with a real job
Connect the tools you need and put a bot to work on a concrete task. Invite a teammate to review the result. Keep building, with recurring updates when the job calls for them.

"PromptQL makes all of our GTM data conversational. Sellers don't need to learn SQL or depend on revenue analysts. They just ask questions and get real answers."

Sr. Director, CRM Engineering
Fortune 100 Tech Company

U.S. GROCERY DELIVERY LEADER

1M+ daily transactions

Strategy & ops teams optimize outcomes in real time

FORTUNE 100 TECH ENTERPRISE

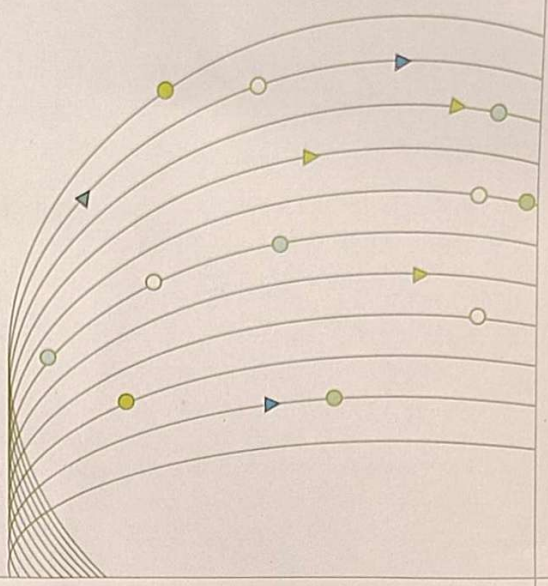

100,000s of customers, 20,000+ sales reps

Auto-generates account plans & next-best actions

Start a bot.
Invite a collaborator.

Visit promptql.io. Bring one real task and a teammate who knows the context.

promptql

Multiplayer AI. Shared Context

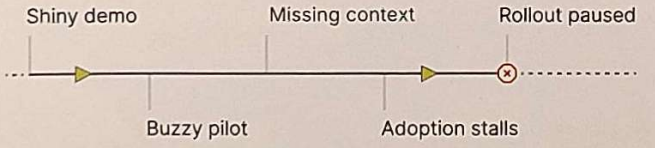

PromptQL gives your team AI co-workers for real work. Start a bot for a question, a task or an ongoing job. Invite teammates and work through it together.

Connect your databases and everyday tools. Bots analyze data, call APIs, run code and create dashboards, sheets, docs, decks and boards.

As you work, review proposed updates to a shared wiki. Decisions, definitions and corrections become context other bots can use.

The problem

A great AI demo doesn't automatically become a way of working. Teams still hit a familiar pattern:

AI can speed up individual tasks. Teamwork still slows down when the right data, expertise and decisions are scattered across tools and conversations.

PromptQL brings people, bots and shared context into the work itself. Less re-explaining. More to build on.

Move faster, *together.*

Give a bot a job. Bring in the people who know the details. Turn the conversation into work your team can review, improve and use.

Data and system access

Connect databases, SaaS tools and APIs instead of manually assembling every input. Bots use the data and tools the person asking is allowed to access.

Knowledge silos

Invite teammates to the same bot to clarify a definition, correct an assumption or add an exception. Review wiki updates so that knowledge helps the next person, too.

Expertise gap

Go beyond an answer. Build a dashboard, update a sheet, draft a doc, assemble a deck or turn a meeting into a board with owners and next steps.

Translation tax

Work through the details with the bot and your teammates in one conversation. Review the output, give feedback and improve it without starting the handoff over.

HALO For AI, Security & IT Leadership by OmniTrust

Take Control of Enterprise AI

Discover Every Risk. Enforce Every Policy. Optimize Every Interaction.

AI adoption is accelerating across employee devices, applications, models and autonomous agents. Halo provides an independent AI control plane to discover usage, protect sensitive information, enforce governance policies and optimize AI workloads, without forcing employees to abandon the tools they already use.

AI adoption is outpacing enterprise control - Organizations face expanding Shadow AI, uncontrolled data exposure, inconsistent AI policies, growing agent authority, escalating inference costs and limited auditability.

TODAY
109:1
machine identities per human

2028
150,000+
AI agents per Fortune 500 enterprise
(Gartner, 2026)

2030
2.5B
active AI agents globally
(IDC, 2026)

NO RUNTIME CONTROL
Agents act without consistent policy enforcement

MODEL LOCK-IN
Teams get stuck with limited model choice and poor routing

TOOL + DATA RISK
Agents can overreach into apps, tools and sensitive data

COST + GOVERNANCE
Scale outpaces visibility, budget control and accountability

OmniTrust's Halo AI Control Plane turns AI governance into operational control, giving enterprises visibility into AI use, enforcement over data and execution, and the freedom to optimize models, infrastructure and cost.

Discover
Discover AI Across Your Enterprise
Gain visibility into sanctioned and Shadow AI through deep endpoint and browser discovery, with actionable inventories and evidence.

Control
Govern & Enforce AI Use
Move from monitoring to active enforcement. Control applications, protect sensitive data and apply enterprise policies where employees work.

Optimize
Secure & Optimize AI at Runtime
Govern model access, inspect AI requests, centrally manage budgets and enable flexible model/provider choices through Halo AI Gateway. These three statements should be the most memorable part of page one.

Add-On:
Halo Agent Studio
Give business teams an approved environment to build and deploy AI agents using the same Halo identity, data protection, policy, runtime and cost controls.

Build → Operate → Scale

© OmniTrust Security LLC

Capability	Features & Outcomes
Deep AI Discovery	Discover sanctioned and Shadow AI across supported desktop applications and browsers; identify affected devices and investigate usage.
Endpoint & Browser Control	Apply centrally managed policies, block unauthorized AI applications and websites, and protect sensitive prompts.
AI Gateway Runtime Security	Inspect requests before upstream model invocation, enforce policy and retain evidence of enforcement decisions.
Centralized AI Spend Control	Set budgets once and enforce spending limits across supported AI applications and coding tools.
Model & Provider Flexibility	Connect preferred inference providers, manage approved models and support private inference through Halo Compute Cloud.
Auditability & Accountability	Review allowed and blocked activity, policy decisions, timestamps and supporting evidence.

Built on Decades of Trust.
Engineered for the AI Era.

OmniTrust extends decades of cybersecurity and cryptographic trust expertise into AI Lifecycle Management. Our **ILM/PKI Agentic Identity Fabric** provides cryptographic identity, authentication and lifecycle trust for autonomous agents, while **Halo discovers, governs and secures AI at runtime.**

Together, they extend OmniTrust's Trust Lifecycle Management foundation from silicon and infrastructure to enterprise AI and autonomous agents.

HALO Key Differentiators

Security without disrupting productivity

Identity Fabric + Trust Infrastructure — ILM PKI

Keep the AI tools you already use

Govern supported ChatGPT, Claude and coding-agent experiences without requiring employees to learn entirely new applications

One place to govern AI spending

Central budget controls follow users across supported applications, models and providers

Protect enterprise credentials

Brokered credentials and short-lived endpoint tokens help reduce exposure of provider API keys

Freedom of models and infrastructure

Choose preferred models and providers, including supported privately hosted inference options.
